## Senior Technical Writer

Software Documentation • API/CLI Reference • Content Strategy • Docs as Code

## SUMMARY

---

Engineer turned technical writer with 14 years of experience creating clear, user-focused software documentation. Expert in DITA, Markdown, and Git, with strong skills in API documentation and structured authoring. Skilled at hands-on testing of UI, CLI, and API applications. Experience developing documentation tooling and automating content creation with Python scripting.

## SKILLS & KNOWLEDGE

---

- **Coding/Development** (Python • HTML • CSS • JavaScript • PHP • VSCode • XML/DITA • JIRA • Linux)
- **Documentation** (API/SDK reference • Release notes • User guides • Tutorials • Troubleshooting)
- **Content strategy** (Information architecture • AI optimization • Content reuse • Style guides)
- **Docs-as-Code** (Markdown • Git • YAML • Static site generation • Swagger/OpenAPI)
- **Visual Communication** (Technical illustration • Video tutorials • Illustrator • Camtasia • Figma)

## WORK EXPERIENCE

---

### Senior Technical Writer and Illustrator - *Raytheon*

November 2025 - Present | Aurora, CO (Remote)

Primary author of user documentation for multiple internal skill development software applications. Work directly with engineering and end users to create clear, user-friendly content.

- Designed a modern docs-as-code pipeline that transformed legacy Word/PDF-based content into scalable, version-controlled documentation using Markdown, custom Python tooling, and GitHub.
- Optimized content for LLM consumption. Conducted testing of responses pre-ingestion and post-ingestion. Improved AI chatbot accuracy by converting Word/PDF to Markdown.
- Drove collaboration between UI/UX and software engineering by helping build a proper release cycle and development process through implementation of JIRA, Confluence, and Figma.

### Principal User Assistance Developer (Technical Writer) - *Oracle*

March 2012 - September 2025 | Broomfield, CO (Remote)

#### Oracle Cloud Infrastructure (OCI) - Customer and Developer Documentation (2021 - 2025)

Led development of customer-facing documentation (including user guides, API documentation, troubleshooting, release notes, etc.) for an OCI cloud service. Conducted hands-on testing of the UI, API, and CLI. Collaborated directly with SMEs (developers, product management, and support teams) to create a comprehensive HTML documentation set.

- Developed a Python script to automate Oracle Linux image release notes generation, reducing a task that took 5 hours down to 15 minutes.

- Edited and enhanced Swagger/OpenAPI specifications. Worked with developers to add SDK examples. Reviewed 1,200+ description statements to improve the API reference guide.
- Leveraged AI tools to review and develop new content, summarize SME demos, and analyze code for API documentation.
- Mentored new writers on the toolset, Git workflows, and publication processes. Worked daily with Git using a shared repository to collaborate with other writers in a global work environment.

#### **Linux and Virtualization Training - Video Tutorials (2021)**

Created how-to videos using Camtasia and Snagit. Experimented with Oracle Linux compute instances and learned Linux concepts to develop course material. Produced the videos end-to-end by capturing screens, recording audio, creating visual aids, and editing.

- Developed the 'Introduction to Oracle Linux' YouTube course with 10+ videos.
- Directed process improvements for video production. Created Camtasia templates to reduce the production time for new videos. Wrote guidance on audio recording and screen capture.

#### **StorageTek Tape Storage — Product Documentation (2012 - 2020)**

Owned and maintained customer-facing and internal service documentation for both hardware and software tape storage products, including user guides, API documentation, and GUI help content.

- Created technical illustrations, infographics, and hardware diagrams using Photoshop and Illustrator, providing visual communication assets used across the entire writing team.
- Reworked legacy content using topic-based writing principles to reduce word count by 50% and significantly lower translation costs while improving clarity and scannability.
- Converted documentation from unstructured to structured XML/DITA, developed new templates, and modernized HTML styling with CSS to improve navigability and searchability.

#### **Project Engineer - Apogee Scientific**

**August 2010 - March 2012 | Englewood, CO**

Performed mercury emissions testing at coal power plants, led site visits, and coordinated testing.

- Authored final technical reports for full-scale mercury testing and laboratory testing, translating complex technical data into clearly structured written deliverables.
- Rewrote an outdated user guide for mercury monitoring equipment, creating detailed equipment diagrams to improve usability.

## **EDUCATION**

---

#### **Colorado School of Mines**

Bachelor of Science | Mechanical Engineering | May 2010 | 4.0 GPA
